

BDL 24 – Battery Data Logger

FEATURES:

- **Voltage** and **Temperature** logging.
- Suitable for batteries up to 24V.
- Log the service life of the battery.
- Extremely low operating current.
- **Analysis software** for Windows.
- USB (adjustable & downloadable).
- Adjustable measuring intervals.

APPLICATIONS:

- Automotive / Marine
- Autonomous / Solar systems
- Telecommunication systems
- Battery back-up systems (UPS)
- Medical / Alarm systems
- Revalidation/ Electric vehicles
- Large and/ or expensive battery banks (Lithium, AGM, GEL, Traction, etc)

PLUG & PLAY! Set includes :
BDL 24 / BATTERY CABLES /
USB STICK (software / manual) and
USB CABLE

The BDL 24 (hereinafter: BDL) is a logger meant for the storage of the voltage and temperature of a battery with adjustable measuring intervals. The BDL operates in combination with the BDL Smart View software. The BDL can be adjusted and data can be downloaded by using this software. The downloaded data can also be analysed. The BDL can log data for several years depending on the set measuring intervals.
